## Version: 1.0

| Overtion 1   |                                |
|--|--------------------------------|
| Question: 1  |                                |
| What does the authentication mode specify? (Choose the best answer.)   |                                |
| <ul><li>A. The challenge type and the accepted surrogate</li><li>B. The protocol used to communicate with the authentication server</li><li>C. The time-to-live for credentials</li><li>D. Whether the credentials will be encrypted</li></ul> |                                |
| _  | Answer: A                      |
| Question: 2  | Amswerry                       |
| What are the four principal policy checkpoints in the order they are reac<br>request? (Choose the best answer.)  | ched, in a typical client HTTP |
| <ul> <li>A. Client in, server out, server in, client out</li> <li>B. Client in, server out, client out, server in</li> <li>C. Client in, server in, client out, server out</li> <li>D. Client in, server in, server out, client out</li> </ul> |                                |
|  | Answer: A                      |
| Question: 3  |                                |
| Where does the ProxySG get the text of the exception page, when it so client? (Choose the best answer.)  | ends an exception page to a    |
| A. From the VPM-XML file B. From WebPulse  |                                |
| C. From the exception definition stored on the ProxySG  D. From Symantec Technical Support   |                                |
|  | Answer: C                      |
| Question: 4  |                                |

Which proxy service intercepts HTTPS traffic when browsers point directly to the ProxySG and Detect Protocol is enabled? (Choose the best answer.)

| A. SSL<br>B. Explicit HTTP   |                         |
|--|-------------------------|
| C. HTTPS D. TCP Tunnel   |                         |
| D. ICF lumer   |                         |
|  | Answer: B               |
| Question: 5  |                         |
| What Is a component of a proxy service listener? (Choose the best answ   | ver.)                   |
| A. Encryption hash   |                         |
| B. Source IP address   |                         |
| C. Proxy mode  |                         |
| D. Proxy type  |                         |
|  | Answer: B               |
|  |                         |
| Question: 6  |                         |
| In which caching technique does the ProxySG open multiple server coreferenced on a web page before the client actually issues the request the best answer.)  A. Popularity contest B. Cost-based deletion                  |                         |
| C. Asynchronous adaptive refresh   |                         |
| D. Pipelining  |                         |
|  | Answer: D               |
| Question: 7  |                         |
| Under which conditions does a policy-driven trace generate a trace? (Ch  | noose the best answer.) |
| <ul><li>A. Only if a global policy trace is NOT enabled</li><li>B. Only if the rule to which it is associated is triggered</li><li>C. Only if a global policy trace fails</li><li>D. Only if WebPulse is enabled</li></ul> |                         |
|  | Answer: B               |
|  |                         |

| Question: 8   |                                       |
|---|---------------------------------------|
| How does an administrator view policy coverage statistics? (Cho                                   | oose the best answer.)                |
| A. View the Policy Coverage statistics section of the sysinfo.  B. Use an advanced URL.           |                                       |
| C. Create a dedicated layer in the VPM.   |                                       |
| D. Use a global policy trace.   |                                       |
|   | Answer: B                             |
| Question: 9   |                                       |
| Which Symantec product is best suited for simultaneously admappliances? (Choose the best answer.) | ninistering a large number of ProxySG |
| A. PacketShaper   |                                       |
| B. Reporter   |                                       |
| C. Management Center  |                                       |
| D. Content Analysis   |                                       |

Question: 10

How do policy checkpoints evaluate the installed policy on a ProxySG? (Choose the best answer.)

- A. At each checkpoint, a decision is made whether to allow or deny the transaction
- B. The Server In checkpoint decides which rules will be evaluated by the other checkpoints
- C. Relevant rules are evaluated at each checkpoint based on the information about the transaction that is available at that point
- D. The Client In checkpoint decides which rules will be evaluated by the other checkpoints

Answer: C

**Answer: C**
